

ONE BREAKAWAY

Field Guide

This Field Guide is designed to support your efforts in executing the One Breakaway selling approach. These examples are not designed to be used verbatim with customers but rather to inspire you as you prepare for your sales calls. All interactions with HCPs must use only approved messaging and all promotion must be fairly balanced with the necessary safety information.

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

Product/disease state information captured on the worksheet must be consistent with approved materials/messages.

The Components

PLAN

Design Your Strategy

- Define the customer's **Current** and **Desired State** and identify the specific **Incremental Shifts** in customer's thinking needed to shift behavior

ENGAGE

Capture Attention and Explore Through Dialogue

- Create mental access with **First Business Words** and use **Gain Insight** and **Challenge Thinking** questions to generate meaningful dialogue and establish Patient-Problem

ADVANCE

Build the Case for Change

- Establish an **Emotional Connection** and use your visual aid to connect clinical data and approved messages to patient/customer challenges (Solution)

CLOSE

Gain Commitment for Action

- Close** for a specific action from the customer aligned to the patient and **Agree** on next steps

FOLLOW UP

Ensure Continuity and Reflect

- Align** prior call to next call, **Communicate** progress with internal team and take time to **Reflect** on your impact

6 Impact Behaviors

Integrate these 6IBs throughout the dialogue for better selling outcomes.

Patient-Message-Patient

- Exploring the HCP's treatment expectations and tying the product's message/benefit back to patient

Discuss; Don't Tell

- Engaging our customers in a true dialogue with a 50/50 balance of speaking and listening

Probe for Growth

- Utilizing thought provoking questions helps to effectively identify new patients who may benefit from our products

Emotive Balance

- Creating associations, exploring negative implications of the status quo, and exploring positive benefits of taking a new action

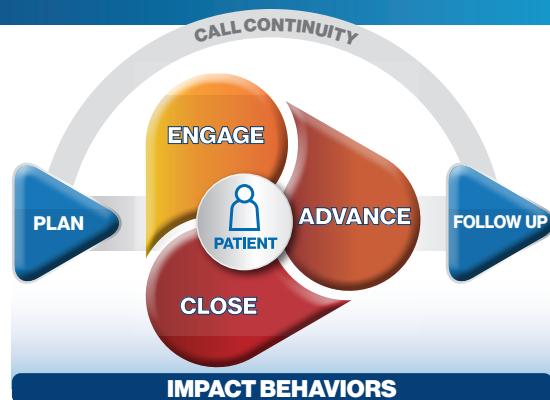

Visual aid + Leave-behind

- Sharing information with our customers in an interactive manner to increase engagement and a greater retention of the message

Close

- Ask for an incremental commitment that is consistent with the conversation and moves the customer to action

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

At Novartis the patient is at the center of everything we do, including our selling approach

This mindset keeps us focused on the patient as we plan for and execute our customer interactions.

Competitive Mindset

Having passion or being “obsessed” about the patient, disease and your product and wish to compete and win for the best patient outcome.

“Patient Obsessed” Specialists are:

- Better prepared
- More confident
- Able to challenge the status quo without fear
- Quick on their feet
- Proactive vs. Reactive — actively seek to identify barriers that are in the way

THE PATIENT JOURNEY

Their Experience

- “When did the patient start this journey and what did it mean for them?”
- “What experiences have they encountered along the way?”
- “How has the journey impacted their family or friends?”

Their Feelings

“Does my doctor understand what I am going through?”

“I just want to feel better.”

“How will this impact our family?”

“How long will I have to be on treatment for this?”

ONE BREAKAWAY Supports All Interactions

Whether you are meeting customers face to face, virtually, or a combination of both, *One Breakaway* is designed to support face-to-face and virtual interactions by creating an engaging and dynamic dialogue.

Utilizing available technologies and resources in an Omnichannel approach can promote more frequent connections and greater retention of the clinical story, leading to a greater chance for behavior change.

Tips when preparing for virtual interactions:

- Secure an appointment ahead of time
- Be prepared and have the resources you intend to share readily available
- Ensure customers have the necessary technology accessible
- Partner with the office staff to set up the technology for the HCP in advance of the meeting

Communication Resources

Power of the Voice

- Be enthusiastic/energetic
- Smile – when you smile, your voice smiles with you
- Match the pace of the person(s) you’re speaking with
- Be confident, and believe in your messages and clinical data

Call Platform

- Keep customer communication preferences in mind
- Leverage the data & insights available to you

Voicemail

- Use your customer’s name to make it personal and leave your email address/phone number
- State the purpose of the call clearly & concisely
- Practice what it may sound like aloud
- Listen to your voicemail and re-record, if necessary
- Encourage a call back by leaving some, but not all information

Rep Triggered Email

- When discussion concludes, look for opportunities to send to customer approved resources
- Use distributed resources as an opportunity to follow up and obtain feedback from the customer

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

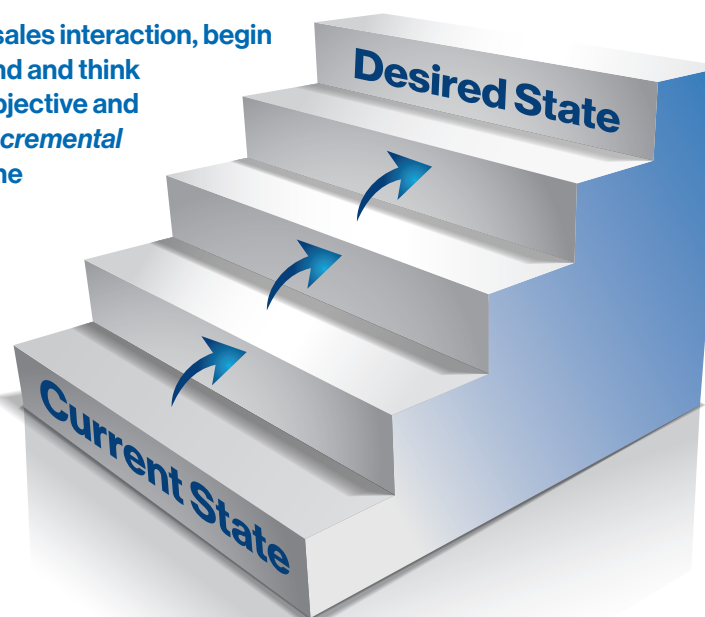

PLAN

Design Your Strategy

- Define the customer's **Current State** of beliefs around the patient and disease using available data, insights and prior knowledge
- Describe the **Desired State**, the long-term change in the customer's thinking and behavior that leads to a better patient experience
- Identify the specific **Incremental Shifts** in customer's thinking needed to move from the **Current State** towards the **Desired State**
- Use the established **Incremental Shifts** to identify your specific call objective

The Big Shift

- Effectively moving a customer from the **Current State** to the **Desired State** often takes many steps
- These **Incremental Shifts** represent small changes in what the customer believes about the patient, the disease and your product
- As you plan each sales interaction, begin with the end in mind and think of how your call objective and **Close** tie into an **Incremental Shift** that moves the customer forward

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

Product/disease state information captured on the worksheet must be consistent with approved materials/messages.

Begin With the End in Mind

Define the **Current State**:

- What is the customer's view on patients, the disease or therapeutic issues?
- Think of it as a belief they hold or their 'status quo' you would like to see changed

Describe the **Desired State**:

- What is a new belief or perspective that you'd like the customer to adopt?
- This new belief should represent a major shift in customer's thinking and should be focused on a better patient experience

Putting it Into Their Words

"I believe a majority of my patients are doing fine and are adequately treated on proven standard therapy, and when they are not, then I will look to something else if a patient requests it."

"I believe my patients struggle with therapeutic change because of unknown adverse events or safety concerns when starting a different therapy."

"I believe every patient is different, and I will make decisions for his/her therapy based on his/her individual needs."

"I believe my patients face serious symptoms and risks associated with their disease, and while there is always risk of adverse events, I am confident in managing these risks for all appropriate patients in order to potentially improve outcomes."

Putting the Plan in Action

Plan Your Incremental Shifts

- How will you help the customer move from the **Current State** to the **Desired State**?
- These are specific and **Incremental Shifts** in customer's thinking that lead to changes in behavior

Think about the patient, the disease and the product as you plan the shifts

ENGAGE

Capture Attention and Explore Through Dialogue

- Create mental access with **First Business Words** focused on customer and patient challenges (**Patient-Problem-Solution**)
- Use questions to **Gain Insight** as well as **Challenge Thinking**
- Develop a **Questioning Strategy** that fosters meaningful dialogue throughout the call

First Business Words

The goal of your first business words is to gain *mental access* to your customer – to make them want to stop and spend time with you.

First Business Words should:

- Capture attention in the first 8-10 seconds
- Be statements, not questions
- Set up the specific customer or Patient-Problem that the conversation will be centered around
- Avoid mention of the product

First Business Words Examples:

"I recently learned that 20% of patients with this disease will experience a reoccurring symptom after the first 3 months of initial symptoms."

"A patient with this disease looks to you for an answer and a fix, but there is not always a 'fix' available to meet the patient's expectations. That must be a struggle for the patient and for you."

"When we last spoke, you told me that your patients with this condition feel helpless and fearful that disease progression may be out of their control, but we know that it doesn't have to be this way."

Questions Start the Dialogue

A meaningful dialogue with your customer is driven by well-planned questions that **Gain Insight** and **Challenge Thinking**.

Gain Insight Questions

- Uncover information about the customer and their approach to patients
- Understand their priorities and their beliefs about therapeutic options

Gain Insight Examples:

"What do these patients tend to struggle with on a daily/weekly basis? What impact does this have on your treatment selection?"

Challenge Thinking Questions

- Push customer's current thinking to new, previously unexplored areas
- Introduce a new, *patient-focused* perspective to the customer
- Explore implications of status quo thinking and reality of expanded beliefs

Challenge Thinking Examples:

"When patients tell you they are altering their lifestyle based on their symptoms, what reinforces your decision to continue with current treatment?"

"Given the new treatment options available, when would you be willing to make a change to your approach?"

Develop a Questioning Strategy

Plan for a series of questions and anticipate your customer's responses to keep the dialogue flowing:

- *"What are the most frequent challenges your patients face with this condition and how does that impact their daily lives?"*
- *Patients are always worrying about their symptoms getting worse which forces them to restrict their activities.*
- *"How do you currently address some of these issues for them?"*
- *It's very challenging, the impact is sometimes unexpected and that is frightening to the patients and their families.*
- *"Is it possible that a more proactive approach to symptom management could help? Would you consider switching therapies if another option could offer improved compliance?"*

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

ADVANCE

Build the Case for Change

- Establish an **Emotional Connection** to the patient and explore **Implications** and **Benefits** of a change in customer's current thinking
- Using a visual aid, connect clinical data and approved messages as an appropriate **Solution** to patient/customer challenges
- Use **Sensory Check-Ins** to uncover and address customer concerns and if there has been a shift in the customer's thinking
- Address customer concerns using **ACRC** and use the customer's own words before bridging back to the conversation

Strike the right emotive balance to help connect the patient to the product.

- **Create associations** that focus on patients and the HCP's experiences, values, and self-interests
- Explore negative **implications** of the status quo and **benefits** of taking a new action
- Convey clinical data and messaging using pictures, situations and stories that resonate and tie back to the patient

"I know your ultimate goal for your patients is to limit their disability"

"Overt progression, or even progression going on silently beneath the surface, can be devastating. I wonder if changing the conversation with these patients could alter their outlook..."

"This clinical data shows that earlier intervention with our product can slow symptom progression..."

Sensory Check-In:

Ask a check-in question to ensure discussion is relevant and meaningful...

- Use sensory words like look, think, feel, sound, see to test if the customer's thinking has changed

Examples:

"Does that sound like a reasonable approach for this type of patient?"

"How do you see this as an option for a patient like the one we were discussing?"

Handling Concerns

ACKNOWLEDGE – Letting the customer know that you have heard their hesitation or concern and take it seriously

"Thanks for sharing that with me. I can understand why you might feel that way."

CLARIFY – Ask questions to gain a deeper understanding of the objection and how important it is to that HCP

"Do you mind sharing with me how you came to that conclusion?"

RESPOND – Provide the appropriate answer to the issue or concern

"I think this information from a clinical trial containing patients similar to the one you are describing should help..."

CONFIRM – Make sure the way you have responded is sufficient

"Does this information answer your question as to whether or not the product is a potential fit for that patient?"

Bridge – Transition back to your discussion at the appropriate point in the dialogue

Clarifying is critical in your Questioning Strategy!
When handling concerns, what might need clarification?

Frequency: *"If you had to guess, how often does this happen in your practice?"*

Level of importance: *"How big of an issue is this for you and your practice?"*

How did they come to that conclusion: *"Is there anything from the past that has led you to that conclusion?"*

Root cause of objection: *"I am curious, is this something that you have had to deal with before?" or "Is your concern based on your experiences with your own patients, or something else?"*

Impact on decision making: *"Does this concern keep you from prescribing the product or hesitate with certain patients?"*

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

Product/disease state information captured on the worksheet must be consistent with approved materials/messages.

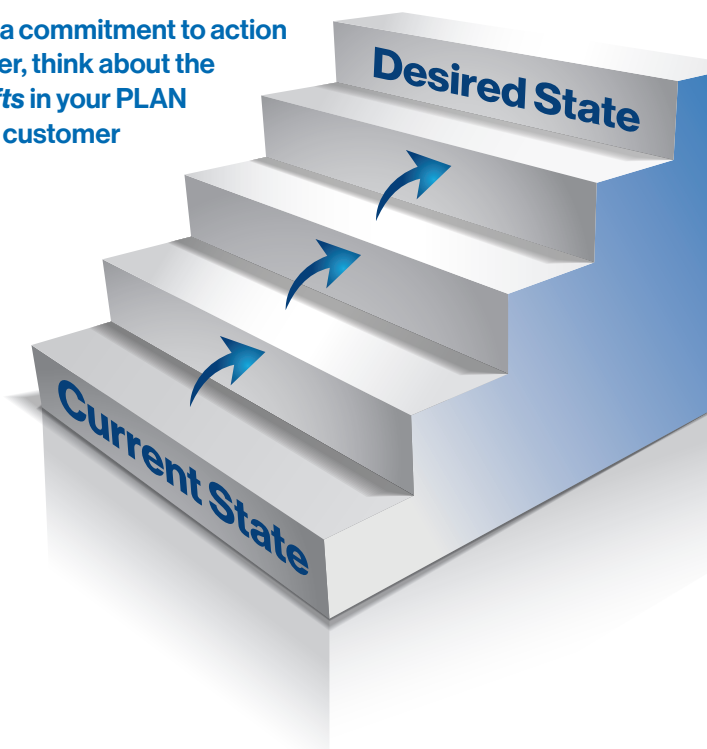

CLOSE

Gain Commitment for Action

- Close for a **Specific Action** from the customer aligned to the patient
- Ensure the agreed upon **Action** is aligned to an **Incremental Shift** that represents a 'step along the way'
- Offer a **Mutual Commitment** and agree to next steps

Steps along the way

- Asking for small commitments is a critical strategy in the selling process and tends to lead to a large behavior change
- Asking for a large commitment such as moving directly from **Current State** to **Desired State** may lead to a small behavior change
- When asking for a commitment to action from the customer, think about the **Incremental Shifts** in your **PLAN** and moving your customer to that next step

Closing in Action

Close

Ask for a commitment to action that is consistent with the conversation and the *Incremental Shift*.

"Since you've identified a few patients with worsening symptoms, will you schedule a follow-up visit with them to discuss a potential change in treatment?"

"Over the next few weeks as you see these types of patients, will you prescribe Product X where appropriate?"

Mutual Commitment/Next Steps

Confirm the actions you commit to and the next steps you will both take.

"I'll leave a supply of our patient support materials with the staff on my way out."

"To make sure this goes smoothly for that patient, I will walk your staff through the process for securing the product and also the proper directions for usage."

Follow Through

Ensure follow-through has been established by both parties during the closing process.

"I will check in with your nurse next week to ensure you have the appropriate patient education materials for any other future patients who may be new to the therapy."

"I will stop back in during the next two weeks to make sure this process went as smoothly as I described – is that OK?"

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

Ensure Continuity and Reflect

- **Align** prior call with next call and determine any future shifts towards **Desired State**
- **Identify and Orchestrate** needed actions on behalf of accounts and their patients
- **Communicate Progress** with internal team and deliver on commitments
- Take time to **Reflect** on the call outcome and evaluate your performance

NAVIGATING THE PATIENT CARE PATHWAY

- Do I know all the players within the account and do they know me?
- Can I help support or simplify the process for them and for their patients? How?
- Does the account know the necessary steps and have them readily available?
- Does the account know all of the particulars (Dosing, Administration, AEs)?
- What internal stakeholders can help us navigate the pathway successfully?

Self-Reflection Questions

It is important to conduct an honest self-assessment after each interaction to gauge impact, your selling effectiveness, and the best path forward

- Was the customer **Engaged** and how was that evident?
 - How did our dialogue **Advance** the customer's thinking and/or behaviors?
 - What incremental action did I **Close** for and what did I commit to doing?
- Was the **Patient** at the center of the call?

This information is for internal use only and is not to be left with, detailed from, or shown to anyone outside of Novartis Pharmaceuticals Corporation or affiliates.

Product/disease state information captured on the worksheet must be consistent with approved materials/messages.

Notes

[illegible]

Building the Call

As always, only approved messaging may be used and all promotion must be fairly balanced with the necessary safety information

PLAN – Design Your Strategy

CURRENT STATE

DESIRED STATE

INCREMENTAL SHIFTS (CUSTOMER)

ENGAGE – Capture Attention and Explore Through Dialogue (Setting up the Patient-Problem)

FIRST BUSINESS WORDS

GAIN INSIGHT QUESTIONS

CHALLENGE THINKING QUESTIONS

ADVANCE – Build the Case for Change (Solution)

Patient Connection

Implications

Benefits

CLINICAL AND BRAND MESSAGES

Sensory check-in: _____

ADVANCE – Build the Case for Change (continued)

CUSTOMER CONCERNS

A Acknowledge

C Clarify

R Respond

C Confirm

Bridge: _____

CLOSE – Gain Commitment for Action

CLOSE

MUTUAL COMMITMENT/NEXT STEPS

FOLLOW-UP – Ensure Continuity and Reflect

PRIOR TO NEXT CALL CONSIDER THE FOLLOWING:

Commitment(s) gained

Next Incremental Shift towards Desired State

Action steps to complete and when

Internal team to involve

Self-Coaching Questions:

- Was the customer **Engaged** and how was that evident?
- What insights did I learn through my questions?
- How did our dialogue **Advance** the customer's thinking and/or behaviors?
- What incremental action did I **Close** for and what did I commit to doing?
- Was the **Patient-Problem** at the center of the call?
